

**Low-temperature neutrn-irradiation of biomaterials and possibility of multi-element analysis. /**  
N. Kuchava /. Nano Studies. – 2015. – # 12. – pp. 183-188. – rus.

The conditions of correct determination of the quantitative content of chemical elements both, in the materials of animal origin and in the environment objects by the method of Instrumental neutron-activation analysis (INAA) have been considered. The low-temperature activation of the studied materials is used. Fig. 3, Tab. 2, Ref. 12.
