

A SYSTEMIC REVIEW ON EFFECTIVENESS OF HOMOEOPATHIC MEDICINES IN ESSENTIAL HYPERTENSION Dr. Jyoti A Moolabharati^{1*}, Dr. Munjal Thakar²

Abstract:

Homoeopathic cure is based on "Law of similar" and selection of remedy is based on constitutional approach in management of any disease. There are several conventional medicines to control high blood pressure like acetazolamide, β -blockers, etc., however these medicines have several side effects. So, there is a need of alternative treatment to control and manage hypertension. There is a wide scope for proper management and treatment of essential hypertension in homoeopathy. As in our system of medicine, we do not treat the disease, but we treat the individual as a whole, who is suffering. Through the individualization with constitutional approach, we can treat both acute and chronic phase of disease to prevent further complication. 10 articles were collected which are related to effectiveness of Homoeopathic medicines in essential hypertension. All the articles were collected from various database, year, and publishers from 2015-2023 from google scholar. All the articles supported the effectiveness of homeopathic medicines in essential hypertension.

Keywords: Blood pressure, constitution, approach, Homoeopathic Medicines, Randomized Control trial, pilot trial, Essential Hypertension

Introduction

Hypertension is defined as elevated blood pressure where systolic blood pressure is greater than 140mm of Hg and diastolic pressure is greater than 90mm of Hg or greater or any level of blood pressure in patient taking anti-hypertensive medications. Hypertension is a common lifestyle disorder and is very strong risk factor for cardiovascular disease (CVDs). It is estimated that it increases the risk at least two-fold for CVDs including coronary artery disease (CAD). congestive heart failures/ strokes, renal failure and peripheral arterial disease. Hypertension is reported 7TH cause of premature death of developing countries and 4TH in developed countries, 13% of global deaths are attributed to raise in blood pressure. In India with a population estimation of 1.1 billion, the prevalence of hypertension has been estimated to be 3% - 34.5% in males and 5.8% - 33.5% in females. By the end of 2025 the projected prevalence of hypertension in Indian men and women are 22.9% and 23.6% respectively, due to modern medicine long term treatment with adverse effect, patients are opting for alternative mode of treatment. The patient who is receiving the conventional mode of treatment experiencing more adverse effect compared to the one who received homoeopathic mode of treatment. Hence, this systemic review study on of homoeopathic medicines in essential hypertension represents the importance of effectiveness of Homoeopathic medicines in management treatment of essential or hypertension.^[1,2]

METHODOLOGY

Related articles were collected from the database like google scholar from 2015 – 2023 by including keywords like essential hypertension, constitutional approach, homoeopathic medicine, etc. Analysis of various articles, methodology drug materials of various studies (see table No. 1).

Table 1 Analysis of various articles in purpose of effectiveness of homoeopathic medicine in

Eur. Chem. Bull. 2023, 12(Special Issue 10), 2607 - 2611

Result

From the study of 10 articles, all articles supported and proved the effectiveness of homoeopathic medicines and mother tinctures in management of essential hypertension.

Discussion

In this review, various articles towards effectiveness of homoeopathic medicines in the treatment or management of essential hypertension from 2015 -

2023 showing various homoeopathic drugs and mother tinctures are there to treat essential hypertension effectively. Therefore, it was concluded that homoeopathic medicines are effective in treatment or management of essential hypertension.²

Conclusion

Throughout the review of literature, it was concluded that the homoeopathic medicines are effective in treatment or management of essential hypertension.

Conflict of interest

Author does not have any conflict of interest.

Acknowledgment

Author is thankful to GHMC&H Bangalore, Karnataka for providing necessary infrastructure and research facilities, author would like to extend thanks for most by line to Dr. Munjal Thakar for their support and guidance to bring this article.
